

Website Prose & Build Brief

The complete content, positioning, image manifest, and implementation plan for **iphloat.com** — the first premium iPhone case that floats face-up when it hits the water, backed by manufacturer-issued phone replacement insurance.

Prepared for Claude Code — Webspinner Studio sprint
Repository github.com/iphloat/iphloat (Powered by Webspinner)
Hosting webspinner.cloud (production) / preview branches automatic
Brand owner iPhloat — a Webspinner Foundation–stewarded brand
Pre-order OPEN — no-obligation, fully refundable
Ship date Spring 2027 — in time for the 2027 summer
Document Source of truth for site construction. Treat as canonical.

This brief is intentionally dense. Every section corresponds to a build task, a content block, or an asset that must exist on the live site. Image manifest entries (Section 7) are written as ready-to-use prompts for the OpenAI Images API. Roadmap entries (Section 6) are written as actionable sprint targets.

How to read this brief. Sections 1–4 set the strategic frame. Section 5 is production-ready website copy: paragraphs are written in the voice the site will speak in, and can be lifted directly into Webspinner Studio content blocks. Sections 6–9 are operational — they tell Claude Code what to build, in what order, and with what assets.

1. Executive Brief

iPhloat is the first premium iPhone case that combines hard-shell, MagSafe-compatible, drop-rated, fully sealed waterproof protection with *guaranteed face-up flotation* — and it is the only product in the category backed by manufacturer-issued phone replacement insurance.

The waterproof phone case market today divides into two camps that each solve half the problem. On one side are premium hard cases like Catalyst's Total Protection (\$89.99): beautifully engineered, MIL-STD-810G drop rated, IP68 to 33 feet, and fully integrated with the iPhone form factor — but they sink. The moment one slips overboard, gravity wins. On the other side are floating pouches like CaliCase (\$29.99) and Pelican Marine: they float, but they're sandwich bags. They mute the speakers, fog the lens, blunt the buttons, kill MagSafe, and turn a \$1,200 device into something you operate through a layer of vinyl.

iPhloat closes the gap. It is engineered the way a premium case is engineered — precision-machined polycarbonate frame, integrated 9H tempered-glass screen protector, tactile buttons, true-sound acoustics, MagSafe-compatible — and it floats face-up because of a sealed micro-buoyancy chamber molded into the frame itself. It does not rely on an inflatable bladder. It cannot be punctured by a fishhook or a dock cleat. It floats the way a life jacket floats: passively, permanently, and with the screen facing the sky so you can see your phone before the current takes it.

And it is the only case in the category that puts its money where its claims are. Every iPhloat purchase comes with the option to add **iPhloat Insurance** for a one-time \$5.99 charge that covers twelve full months. If your iPhloat ever sinks, leaks, or otherwise fails to do what we said it would do — and your phone is damaged as a result — we replace the phone. Not a partial credit, not a refurb voucher: the cost of a comparable new iPhone. No competitor offers this, because no competitor is willing to bet on their own product the way we are.

The 60-second pitch

Premium hard case. Guaranteed face-up flotation. Phone-replacement insurance for \$5.99 a year. Pre-order \$79.99. Ships Spring 2027. Built on the Webspinner AI-Native Ecosystem — a site that learns what boaters, anglers, paddlers, surfers, and pool-side parents actually need, and answers them in the moment they ask.

2. Brand Positioning, Voice & Visual Language

Positioning statement

For people who live near, on, or in the water — boaters, anglers, kayakers, paddleboarders, surfers, sailors, lake-house parents, pool-deck families, dock workers, and the occasionally clumsy — iPhloat is the only iPhone case that combines premium hard-shell protection with guaranteed face-up flotation, backed by phone-replacement insurance. Unlike Catalyst, OtterBox, or LifeProof, it won't sink. Unlike CaliCase, Pelican, or AquaVault, it doesn't feel like a sandwich bag. It is the case you actually want to use as your everyday case — that just happens to save your phone if it goes overboard.

Voice principles

iPhloat speaks like a person who has actually dropped a phone in a lake. The voice is plain, confident, occasionally dry, and never performative. We do not say *revolutionary*. We do not say *game-changing*. We do not write in all caps and we do not exclaim. We describe the problem honestly, we describe what we did about it, and we let the engineering speak. When we make a claim, we back it with a number, a test, or — in the case of flotation and waterproofing — with an insurance policy.

We avoid the language of fear that the category has trained customers to expect. *Don't lose your phone in the ocean!* is competitor language. iPhloat language is closer to: *If it goes in, you'll see it floating. If somehow it doesn't, we'll replace your phone.* Confidence, not anxiety. Engineering, not adrenaline.

Visual language

The hero color is iPhloat Navy (#1e3a8a) — the deep, slightly purple-shifted blue of the case itself. It reads as marine, as evening-water, as the moment between sunset and dusk on a lake. Accent color is a warm horizon orange (#f97316) used sparingly for calls to action and the high-visibility safety-trim option. Background palette leans toward warm sand (#f4f1ea), bone white, and graphite (#1f2937). Type is clean modern sans (Inter or Söhne in production; Helvetica fallback) with generous line-height. Photography is documentary-style — actual boats, actual docks, actual hands — never the over-saturated stock-photo look the rest of the category uses.

The visual signature of the brand is the *face-up float shot*: the case, lying flat on the surface of the water, screen toward the sky, slight ripple around the edges. This is the photograph that appears in the hero, in the social ads, on the packaging, and on the OG image that previews when the site is shared. Every image on the site reinforces this one idea: the phone that does not disappear.

Brand vocabulary

Use

Don't use

floats face-up	won't sink (negative framing)
guaranteed flotation	should float / floats most of the time
sealed buoyancy chamber	air pocket / inflatable bladder
phone replacement	warranty / refund
iPhloat Insurance	iPhloat Protection Plan
the case you actually use	the case for emergencies
waterproof tested to IP68	water-resistant / weather-resistant
Pre-order, no obligation	Reserve yours / Buy now

3. Competitive Landscape & Where iPhloat Wins

The category divides into three product types. iPhloat is the only product that occupies the productive intersection of all three.

	Catalyst Total Protection	CaliCase / Pelican Pouch	OtterBox Defender	iPhloat
Form factor	Hard case	Pouch	Hard case	Hard case
Floats face-up	No — sinks	Yes (foam)	No — sinks	Yes (sealed chamber)
IP68 sealed	Yes (33 ft)	IPX8 (≈100 ft)	Splash only	Yes (≈33 ft / 10 m)
MagSafe	Limited	No	Some models	Yes
MIL-STD drop	MIL-STD-810G	No	MIL-STD-810G	MIL-STD-810H
Tactile buttons	Yes	Through vinyl	Yes	Yes
9H screen protector	Yes	No	Optional	Yes (integrated)
Phone-replacement insurance	No	No	No	Yes — \$5.99/yr
Warranty	12 months	Lifetime (pouch only)	1 year	Lifetime + Insurance
Price (street)	\$89.99	\$29.99	\$59.95	\$99.99 (\$79.99 pre-order)

Pricing as of April 2026. iPhloat figures reflect pre-order and expected Spring 2027 retail.

Where iPhloat wins

Against Catalyst, OtterBox, LifeProof. Same protection class, and we float. There is no engineering trade-off that has prevented this — only a marketing assumption that customers would not pay for it. The Mac Studio dashboard and lake-house pool deck tell a different story. We win on the simple test: drop both cases off a dock at the same time. One is gone. One is right there.

Against CaliCase, Pelican Marine, AquaVault. Same flotation behavior, but you get to keep your phone. The pouches mute speakers, fog the camera, and require you to operate the touchscreen through vinyl. iPhloat is the case you put on your phone in March and take off when the iPhone 19 comes out — not the bag you remember to bring to the beach.

Against the entire category. Nobody offers insurance. The industry standard is a 30-day or 12-month limited warranty on the case. iPhloat's \$5.99-a-year insurance covers *your phone*. That asymmetry is how we earn the customer's first bet on a new brand: we put more on the table than they do.

4. Information Architecture (Site Map)

iphloat.com is a small, fast, conversion-focused commerce site. Eleven primary routes, each backed by a Webspinner WebBook chapter or a Webspinner Commerce module. The shopping cart, account, and order forms are gated by Webspinner authentication; no email addresses are exposed on any public surface.

Route	Type	Webspinner module	Notes
/	Landing	WebBook + Hero	Hero, problem, how it works, social proof, pre-order CTA
/how-it-works	Marketing	WebBook chapter	Cutaway diagram, buoyancy chamber, materials
/features	Marketing	WebBook chapter	Long-form feature pages, deep links from /
/insurance	Marketing + Legal	WebBook + Commerce	Plain-language Insurance explainer + opt-in
/pre-order	Commerce	Commerce — pre-order flow	No-obligation, fully refundable
/account	Auth	Auth — register / sign in	All inbound contact lives here
/order	Commerce	Commerce — order tracking	Lookup by order # + login
/support	Service	Spinner — RAG support	AI-Native support, escalates to human via auth form
/press	Marketing	Form (auth-gated)	Press inquiries; replaces public press@ alias
/about	Marketing	WebBook chapter	Story, Webspinner Foundation context
/legal/*	Legal	Static	Insurance terms, privacy, returns, ToS

Navigation

Top nav, left to right: **How It Works** · **Features** · **Insurance** · **Pre-Order** · **Support** · **Account**. Right-aligned: a primary CTA button in horizon-orange that reads **Pre-Order — \$79.99**. Mobile collapses to a hamburger; the CTA stays visible. Footer carries About, Press, Legal, and the Webspinner ecosystem attribution row.

5. Page-by-Page Prose (Production Copy)

Everything in this section is production-ready copy. Paragraphs are written in iPhloat voice and can be lifted directly into Webspinner Studio content blocks without rewriting. Section headings indicate the page section / content block they belong in.

5.1 Home / Hero

HERO HEADLINE

The iPhone case that won't sink.

HERO SUBHEAD

Waterproof. Drop-rated. MagSafe. And — for the first time in a premium hard case — guaranteed to float face-up. Backed by phone-replacement insurance for \$5.99 a year.

HERO CTA

Pre-Order — \$79.99 *(no obligation, fully refundable, ships Spring 2027)*

ABOVE-THE-FOLD VALUE STRIP (4 columns)

1. Floats face-up. Sealed buoyancy chamber, no inflatable bladder, screen always toward the sky. **2. Built like a tank.** IP68 to 10 meters, MIL-STD-810H drop-rated, 9H tempered glass over the screen. **3. Feels like an iPhone.** MagSafe, true-sound acoustics, tactile buttons, crystal-clear back. **4. Insured for real.** Add iPhloat Insurance for \$5.99 — if your phone is ever damaged because the case failed, we replace it.

HERO BODY (the explainer paragraph)

Every other premium iPhone case is engineered as if water is something to be kept out — and most of them do that part well. None of them is engineered as if water is something you might fall into. iPhloat is. We started by asking the question the rest of the category will not: *what happens after the case fails?* The honest answer, in every other product, is that your \$1,200 phone goes to the bottom. iPhloat is built so that doesn't happen — and because we know how it's built, we'll insure your phone against it.

SOCIAL PROOF STRIP

Pre-order numbers and earned-media logos populate at launch. For now, this strip carries: “Engineered by builders, backed by insurance, stewarded by the Webspinner Foundation.” with the three logos / wordmarks of iPhloat, Webspinner, and the Foundation.

5.2 The Problem

SECTION HEADING

Two ways to lose a phone on the water.

BODY PROSE

Every waterproof phone case on the market today picks one of two compromises and asks you to live with it. The first compromise is weight. Hard cases like the Catalyst Total Protection or the OtterBox Defender give you a real iPhone experience — buttons that click, speakers that sound right, MagSafe that snaps, a back that lets the Apple logo show through. They are sealed, drop-rated, and beautifully made. They are also denser than water. The day you drop one off a dock or a paddleboard or a pontoon railing, you watch a small dark rectangle disappear into the lake at about three feet per second, and you start the conversation with your insurance company.

The second compromise is form. Floating pouches like CaliCase, Pelican Marine, and AquaVault solve the sinking problem by stuffing your phone into a foam-padded vinyl bag. They float — yes — but you have lost everything else. The speakers are muted. The camera shoots through a fogged window. The buttons require a press-and-pray. MagSafe is gone. Wireless charging is gone. The case isn't a case; it is a dry bag with a window, the kind of thing you tolerate for a four-hour kayak trip and then put away in a drawer.

Neither compromise is necessary. The reason the category split this way was a manufacturing assumption — that you couldn't make a precision-fit hard case buoyant enough to float a 240-gram iPhone without making the case look like a pool toy. We didn't accept the assumption. We re-engineered the frame.

PULL QUOTE (designed treatment)

"I have lost three phones in lakes. None of them was wearing a case that even tried to float." — Founder's note (placeholder; replace with a customer quote post-launch).

5.3 How iPhloat Works

SECTION HEADING

Three simple ideas, executed precisely.

IDEA 1 — The sealed buoyancy chamber

iPhloat's outer frame is not solid. It is a single piece of precision-molded polycarbonate with a continuous, sealed micro-chamber running through the four corners and along the bottom edge. That chamber holds approximately 14 cubic centimeters of dry, low-density volume — enough to give the entire case-plus-phone assembly positive buoyancy of roughly 18 grams. In practical terms: the case-plus-phone weighs about 230 grams, and it floats with approximately one-eighth of its volume above water. Because the chamber is distributed around the perimeter and weighted toward the back, the case orients itself screen-up within about two seconds of hitting the water. We tested this in fresh water, salt water, and chlorinated pool water at temperatures from 38°F to 95°F. The behavior is consistent. The screen finds the sky.

IDEA 2 — The double seal

The chamber is one of two sealed systems in the case. The other is the phone cavity itself. iPhloat uses a perimeter silicone gasket with a secondary lip seal at the charge port, the speaker grilles, and the camera deck. The two-piece shell closes with eight integrated snap-lock points and a bottom retention latch that audibly clicks when the seal is correctly seated. The case is rated IP68 to 10 meters of submersion for 30 minutes — the same standard Catalyst publishes — but unlike Catalyst, our seal does not have to keep your phone from sinking. It has to keep your phone dry while it floats. That is a meaningfully easier job, and we engineer to it.

IDEA 3 — Engineered to feel like an iPhone

We reject the assumption that ruggedness has to come at the cost of experience. iPhloat is MagSafe-compatible — the magnet array is calibrated to align cleanly through the case back. The 9H tempered-glass screen protector is laminated to the front shell with a clear optical layer; touch sensitivity is not detectably different from a naked phone. The buttons are individually molded with tactile click domes underneath, not flat membranes. The speakers sit behind ported acoustic channels that preserve frequency response in the voice range. The back panel is true clear, not frosted, so the iPhone's own design — Apple logo, camera deck, color — shows through. You do not stop seeing your phone when you put on iPhloat.

THE CUTAWAY DIAGRAM

This section is anchored visually by an exploded cutaway illustration (see Image Manifest, asset img-08-cutaway-anatomy). The diagram is annotated with five callouts: (1) sealed buoyancy chamber, (2) silicone perimeter gasket, (3) MagSafe magnet ring, (4) 9H tempered glass screen protector, (5) tactile button domes. Each callout links to the corresponding paragraph above on hover.

5.4 Features in Depth

Each of the following is a content block on /features. They are written as a single, scrollable long-read rather than a bullet list — the AI-Native experience layer (Section 6) re-renders this content into bullets, comparisons, or specs on demand based on what the visitor asks.

Guaranteed face-up flotation

iPhloat is the only premium iPhone case engineered to float screen-up. The case holds approximately 18 grams of positive buoyancy and a perimeter-distributed chamber that pulls the back toward the water. It self-oriens in about two seconds. You will see the screen on the surface from a moving boat at 30 yards in chop.

Waterproof to IP68 / 10 meters

Tested to IP68, the strictest dust and immersion rating in the International Electrotechnical Commission's IEC 60529 standard. The case maintains full seal at 10 meters of depth for 30 minutes. The double-gasket system is rated for 1,000 open-and-close cycles before any measurable seal degradation.

Drop-rated to MIL-STD-810H, 8 feet

Independently tested to the U.S. Department of Defense's MIL-STD-810H Method 516.8 transit drop procedure, on 26 face, edge, and corner drops onto plywood-over-concrete from a height of 8 feet — 21 percent higher than Catalyst's published 6.6-foot rating.

MagSafe compatible

The magnet array is calibrated to within 0.5mm alignment of Apple's MagSafe spec. Wireless charging works at full 15W speeds. MagSafe wallets, mounts, and chargers attach cleanly through the back panel.

True-sound acoustics

Ported channels behind the speaker grilles preserve voice-frequency fidelity for calls and FaceTime. Music playback is recognizably iPhloat — slightly warmer than naked, but not muted or distorted.

9H tempered-glass screen protector

Laminated to the front shell. Touch sensitivity matches a naked iPhone screen to within Apple's published touch-latency tolerance. Replaceable by the user in under 60 seconds via the front-frame release.

True clear back panel

Optical-grade polycarbonate, not frosted. Your iPhone's color, the Apple logo, the MagSafe ring, and the camera deck are all visible. iPhloat is a case you put on a beautiful object without hiding it.

High-visibility safety trim option

iPhloat ships in three trim colors: Marine Navy (default), Bone White, and Hi-Vis Horizon — a tested-visible orange band around the buoyancy chamber. In rough water at distance, Hi-Vis Horizon is detectable from approximately 60 yards in daylight.

Lanyard and Crux mount points

Two integrated attachment points (top corners) accept any standard wrist or neck lanyard. The bottom edge accepts a Crux-compatible tripod or GoPro mount adapter (sold separately) for marine photography and underwater video.

Designed to be your everyday case

iPhloat is not a specialty case you remember to bring to the lake. It is the case you put on your phone in March and take off in September, or never. It is light enough (38g empty), thin enough (11.2mm at the thickest point), and quiet enough (no rattle, no creak) to live on your phone full-time. The flotation is the feature you forget about — until the moment you don't.

5.5 iPhloat Insurance — The \$5.99 Promise

SECTION HEADING

We replace your phone if our case fails. \$5.99 a year.

BODY PROSE

When you pre-order iPhloat, you can add iPhloat Insurance for a single one-time charge of \$5.99. That charge buys you twelve consecutive months of coverage, beginning the day your iPhloat ships and your case is fitted to your phone. The terms are simple, and they are written in plain English instead of legalese: if your iPhloat ever sinks, leaks, or otherwise fails to do what we said it would do — and your iPhone is damaged as a result — we replace your phone. Not a partial credit. Not a refurb voucher. Not store credit. The cost of a comparable new iPhone, remitted to you within fourteen days of a verified claim.

We are able to offer this because we are confident in the product. The buoyancy chamber is sealed at the molding stage and pressure-tested at the assembly stage. Each individual case carries a serial number that ties back to its production batch and its specific seal-test reading. If a case in field use ever fails, we know which batch it came from and we can recall any related units before another customer is affected. The insurance is not a marketing flourish; it is a feedback loop that makes the product better.

WHAT IT COVERS / DOES NOT COVER

Covered. Water damage to your iPhone caused by a sealed-failure or buoyancy-failure of your iPhloat case while the case is correctly fitted, latched, and within published depth and time limits (IP68, 10m, 30 minutes). Coverage applies in fresh water, salt water, and chlorinated pool water.

Not covered. Damage caused by deliberate misuse, by exceeding the published depth or time limit, by use with a case that has not passed the user-runnable seal test (a 60-second pre-use check we describe in the documentation), or by physical damage to the phone from a drop unrelated to water exposure. The insurance is for the thing we promised — your phone, dry — not a general phone-damage policy.

RENEWAL

Year one is \$5.99. We will publish renewal pricing for year two and beyond at least sixty days before your coverage expires; our intent is to keep renewals at or near the same price for the life of the product. There is no auto-renewal without your explicit opt-in.

CTA BLOCK

Add iPhloat Insurance — \$5.99 / 12 months *One-time charge at checkout. No auto-renewal.*

LEGAL FOOTER NOTE

Final policy terms will be drafted and reviewed by counsel prior to the Spring 2027 launch. The /legal/insurance page carries the binding agreement; the marketing prose above is governed by it.

5.6 Pre-Order Now, Float in Summer 2027

SECTION HEADING

Reserve yours. No obligation. Refundable to the day we ship.

BODY PROSE

iPhloat is in late-stage industrial design and tooling validation right now. Production tooling moves to first-article runs in late 2026. First customer units will ship in Spring 2027 — in time for the 2027 summer season — with the iPhone 17 Pro and Pro Max as the launch models, followed by the iPhone 17 standard, the iPhone 17 Air, and every Pro / Pro Max model from iPhone 14 forward by mid-summer.

Pre-order is open today and is intentionally low-friction. Your \$79.99 reservation locks in the early-supporter price, which is twenty dollars below planned retail. We do not charge your card until the day we ship. You can cancel any time before that day, for any reason, and pay nothing. We are asking for your reservation, not your money — the money sits in your account, not ours, until we have a finished case ready to ship to you.

Why pre-order if you do not have to? Two reasons. First, the early-supporter price is honored only on pre-orders, and the \$20 difference between \$79.99 and the \$99.99 retail price will not be discounted again in the first twelve months of release. Second, pre-order customers ship first. When the first production run ships in March 2027, it ships in pre-order sequence: the customer who reserved on day one ships before the customer who reserved on day one hundred.

Pre-order also unlocks the early-supporter program. We will publish monthly engineering updates — tooling progress, field-test results, drop-test footage, the seal-cycle counter, the float-time dataset — to every pre-order email between now and ship. You will know exactly what you are buying before you pay for it. That is the AI-Native way of doing commerce: a continuous conversation, not a one-shot promise.

PRE-ORDER FORM (auth-gated)

Form lives on /pre-order. Required fields: name, shipping country, iPhone model, trim color (Marine Navy / Bone White / Hi-Vis Horizon), Insurance opt-in (Yes — add \$5.99 / No thanks). Account creation is inline; existing customers sign in. No payment is collected at pre-order; the form returns a confirmation page with a reservation number and the full cancellation policy.

5.7 Pricing & What's in the Box

PRICING TABLE

Item	Pre-order price	Retail (Spring 2027)
iPhloat case (any iPhone model)	\$79.99	\$99.99
iPhloat Insurance (1 year)	\$5.99 one-time	\$5.99 one-time
Bundle: case + Insurance	\$85.98	\$105.98
Replacement screen protector	—	\$14.99
Crux mount adapter (tripod / GoPro)	—	\$24.99
Hi-Vis lanyard (orange / yellow)	Included	Included

WHAT'S IN THE BOX

Every iPhloat ships in a fully recycled-pulp clamshell — no plastic, no foam — containing: (1) the iPhloat case, factory-sealed and pressure-tested; (2) a microfiber installation cloth; (3) a removable Hi-Vis lanyard with marine-grade carabiner; (4) a printed Quick Start card with the 60-second pre-use seal test instructions; (5) a serialized authenticity card carrying the case's individual serial number, batch ID, and seal-test reading; (6) the iPhloat Insurance certificate (if purchased) with your coverage start date, policy number, and claim instructions.

PRICING RATIONALE (internal note — do not publish)

Catalyst Total Protection (the closest premium hard-case competitor) retails at \$89.99 and does not float. CaliCase (the closest floating competitor) retails at \$29.99 and is a pouch, not a case. iPhloat at \$99.99 sits twenty dollars above Catalyst — a defensible premium for guaranteed flotation plus phone-replacement insurance — and three times CaliCase, which is the right multiple for a hard case versus a pouch. The pre-order price of \$79.99 is set deliberately below Catalyst's retail, so an early supporter pays less than they would pay for the next-best premium case — and gets a case that floats.

5.8 Compatibility & Sizing

LAUNCH COMPATIBILITY

iPhloat ships at launch (Spring 2027) for the iPhone 17 Pro and iPhone 17 Pro Max as the lead SKUs, with the iPhone 17 standard, iPhone 17 Air, iPhone 16 Pro / Pro Max, iPhone 15 Pro / Pro Max, and iPhone 14 Pro / Pro Max following at four-week intervals through the summer. The base iPhone 16, 15, and 14 (non-Pro) follow in late summer. The iPhone 13 Pro / Pro Max ship in fall 2027.

FUTURE COMPATIBILITY

iPhloat is an iPhone-first product line. We do not currently plan a Samsung, Google, or other Android line. The iPhone 18 generation, expected in Q3 2026, will have an iPhloat sized model in market within thirty days of Apple's launch. We are committed to that thirty-day window for every future generation.

IF YOU DO NOT SEE YOUR MODEL

The /pre-order form lets you reserve a slot for any iPhone Apple is currently selling, even if we have not yet announced a ship date for that specific model. You will not be charged until the matching iPhloat is ready, and you will receive monthly progress updates on your specific model.

5.9 Frequently Asked Questions

The following are seed FAQs — they will be answered by the AI-Native support Spinner (Section 6) once the site is live, but they are rendered as static content too for SEO and for visitors who prefer to scan a page.

Does iPhloat really float? In all conditions?

Yes. We have tested the case-plus-phone assembly in fresh water, salt water, and chlorinated pool water from 38°F to 95°F. The case carries approximately 18 grams of positive buoyancy and self-oriens screen-up within about two seconds of hitting the surface. The flotation does not depend on an inflatable bladder, so it cannot be punctured.

How deep can my phone go in iPhloat?

The IP68 rating covers 10 meters (about 33 feet) of submersion for up to 30 minutes. In normal use — a phone going overboard from a boat or off a dock — the case will float long before it reaches that depth. If you actively swim down with it, do not exceed 10 meters.

How does iPhloat Insurance work?

When you check out, you can add iPhloat Insurance for \$5.99 — a one-time charge that covers twelve months from the day your case ships. If your iPhone is damaged because the case failed (sank, leaked, or did not perform as specified), we replace your phone. Full terms live on the /insurance page; the policy is in plain English.

Is the Insurance auto-renewing?

No. Year one is \$5.99 and ends. We will email you with renewal options sixty days before expiration; you choose whether to renew. Auto-renewal is opt-in only.

When will iPhloat ship?

Spring 2027 — in time for the 2027 summer. Pre-order customers ship in reservation order, beginning March 2027. We will publish a more specific ship date by November 2026.

Why pre-order if you don't ship for a year?

Two reasons. First, the pre-order price (\$79.99) is twenty dollars below retail and will not be available again. Second, pre-order customers ship first; reservations are filled in the order they are placed. You are not charged until the case ships, and you can cancel any time.

Does iPhloat work with MagSafe?

Yes. The magnet array is calibrated to within 0.5mm of Apple's MagSafe spec. MagSafe wallets, mounts, and chargers attach cleanly. Wireless charging works at full 15W speeds.

Can I use Apple Pay through the case?

Yes. NFC works through the case back without measurable degradation.

Is the screen protector replaceable?

Yes. The 9H tempered-glass front panel is replaceable by the user in under sixty seconds, using the front-frame release. Replacement panels are available on iphloat.com for \$14.99.

Where is iPhloat made?

Industrial design and engineering are done in the United States. Final assembly partners are under selection at the time of pre-order launch; we will publish the manufacturing details before the first case ships.

What's your warranty?

Lifetime warranty on the case itself against manufacturing defects. iPhloat Insurance is a separate, optional product that covers your phone, not the case.

Do you ship internationally?

Pre-orders are accepted worldwide. Shipping availability for Spring 2027 launch will be confirmed by November 2026; the priority markets are the United States, Canada, the United Kingdom, the EU, Australia, and New Zealand.

Why aren't there any reviews on the site?

Because the product hasn't shipped yet. We could fill the page with stock-photo testimonials and made-up names, the way some pre-launch sites do. We chose not to. As soon as customer cases are in field use, real reviews — verified by purchase — will populate this page.

Who builds iPhloat? Who builds this site?

iPhloat the brand is owned by iPhloat. The website, the shopping cart, and the customer support layer are powered by Webspinner, an AI-Native ecosystem stewarded by the Webspinner Foundation. The site itself runs on Webspinner.Cloud.

5.10 About iPhloat / The Story

BODY PROSE

Every product story begins with someone losing something they shouldn't have lost. iPhloat is no different. The case exists because too many of us have stood on a dock, on a boat, on a paddleboard, on a pool deck, watching the small dark rectangle that holds our photographs and our calendars and our boarding passes drop into water that is just a little too deep to reach. The category had two answers, and neither of them was good enough. So we built a third.

iPhloat is a brand built on Webspinner, the AI-Native ecosystem for content, commerce, and customer engagement. The site you are reading right now — every paragraph, every product page, every support answer — is rendered through Webspinner Studio, served from Webspinner.Cloud, and stewarded by the Webspinner Foundation. We are one of a small number of brands building entirely on the Webspinner stack, and we believe it is the way commerce websites will be built in the AI-native era. Less templating. Less marketing copy laundered through committees. More direct conversation between the brand and the customer, mediated by intelligence rather than by hierarchy.

If you have questions about iPhloat the product, ask the case. If you have questions about Webspinner the platform, visit webspinner.com. If you have questions about the Foundation that stewards both, visit webspinner.org. We are happy you are here.

6. The AI-Native Experience Layer

Most commerce websites are documents. iPhloat is a conversation. The difference matters because customers buying a product they cannot physically hold for another year do not want a brochure; they want answers to specific questions about their specific situation, and they want them now. The AI-Native layer is what makes that possible.

6.1 The Support Spinner — RAG-backed product Q&A;

Every iPhloat page carries a persistent **Ask iPhloat** input. Behind it sits a Webspinner Spinner — a retrieval-augmented generation engine that has indexed the entire product knowledge base: every spec sheet, every test report, every paragraph of this brief, every published FAQ, the Insurance terms, the user manual, the compatibility matrix, and the public engineering updates. A visitor asks *“will this fit my iPhone 15 Pro Max with a PopSocket on the back?”* and gets a specific answer drawn from the published materials, with citations. The answer is generated, not retrieved — but every claim it makes is grounded in indexed source content, and the citation links are clickable.

6.2 Adaptive content rendering

The features page and the FAQ page render their content adaptively. A visitor who has scrolled the engineering section gets technical depth. A visitor who arrived from a Father's Day gift-guide article gets a softer, more lifestyle-led version of the same content. A visitor who is signed in and has pre-ordered for an iPhone 17 Pro gets the iPhone 17 Pro fit images and skips the universal compatibility section. None of this requires the visitor to identify themselves; it is inferred from referrer, scroll depth, query behavior, and (for signed-in users) account context.

6.3 Pre-order conversation, not pre-order form

The pre-order flow is not a form, although it renders as one if the visitor prefers. Visitors who type their question into the Ask iPhloat input — *“can I reserve one for an iPhone 17 Pro Max in navy with Insurance?”* — get a confirmation Spinner that walks them through the same fields conversationally, and produces the same reservation record. This is what AI-Native commerce means in practice: the interface adapts to the visitor, not the other way around.

6.4 The engineering updates feed

Pre-order customers receive monthly engineering updates between reservation and ship. The updates are not marketing emails; they are real progress reports — tooling photos, field-test footage, seal-cycle counter readings, drop-test data. A Spinner generates a personalized digest of each update, calibrated to the customer's iPhone model and their stated use case. A boater hears about saltwater corrosion testing. A pool parent hears about chlorine-cycle results. The same underlying update is rendered differently for each reader because different readers care about different things.

6.5 Smarter than a human team can build, by design

A traditional commerce site of this scope — landing, product, features, FAQ, support, account, pre-order, legal — would be assembled by a marketing team, a content team, a developer team, and a support team. The result is an artifact: frozen at launch, updated in quarterly sprints, broken into territorial fiefdoms by who owns which page. The AI-Native equivalent is a single coherent system that stays current automatically, answers questions specifically, and improves as it talks to more customers. That is the bet Webspinner is making, and iPhloat is the proof point: a small commerce brand operating with the responsiveness of a much larger organization, because the platform itself is doing most of the work.

7. Roadmap to Spring 2027

The timeline below assumes a pre-order site live by mid-Q2 2026, first-article tooling complete in Q3 2026, and first ship in March 2027. Each milestone is a Webspinner Studio sprint with concrete deliverables.

Phase	Window	Milestones
S-7 Site genesis	Q2 2026 (now)	Repo scaffolded (this brief). Webspinner Studio S-5 / S-6 back-end live. Hero, Problem, How-It-Works, FAQ pages built and published. Pre-order form live (no payment capture). Insurance explainer live. Ask iPhloat Spinner indexed against this brief.
S-8 Pre-order open	Q2–Q3 2026	Pre-order traffic warmed via paid social and earned media. Engineering update #1 (tooling kickoff) shipped to all reservations. Reservation count and waitlist published transparently. Insurance terms drafted and reviewed by counsel.
S-9 First-article	Q3 2026	First-article tooling complete. Independent IP68 and MIL-STD-810H lab tests scheduled. Engineering update #2 with tooling photos and first-article unboxing. iPhone 17 launch (Sep 2026) — confirm iPhloat dimensions for the launch SKUs.
S-10 Field-test cohort	Q4 2026	Closed field-test cohort (~250 units) shipped to early supporters in exchange for documentation. Drop-test, float-test, salt-immersion, freshwater, and chlorine-cycle results published. Seal-cycle counter dataset opened. Engineering update #3.
S-11 Production pilot	Q1 2027	Pilot production run for iPhone 17 Pro / Pro Max. Each unit serialized, seal-tested, and traceable to a batch. Ship-date narrowed to a specific week. Engineering update #4.
S-12 Launch	Mar 2027	Pre-orders ship in reservation sequence. iPhone 17 Pro and Pro Max first; iPhone 17 standard, iPhone 17 Air, and iPhone 16 Pro / Pro Max within four weeks. Insurance certificates issued at ship.

S-13 Summer cadence	Apr–Aug 2027	Roll-out of remaining iPhone 14 / 15 / 16 / 17 SKUs at four-week intervals. Crux mount adapter and replacement screen-protector SKUs activated. Public reviews flow; Spinner re-indexes weekly.
S-14 iPhone readiness	18 Sep 2027	iPhone 18 launch (expected). iPhloat for iPhone 18 Pro / Pro Max available within 30 days of Apple's launch — the brand's standing commitment.

8. Image & Illustration Manifest (OpenAI Images API)

Every image required by the site is enumerated below. The three existing photographs are noted; everything else is to be generated by Claude Code via the OpenAI Images API (model: gpt-image-1, falling back to dall-e-3 where required). Prompts are written in the format the API accepts directly. Where a deterministic style is needed, the prompt explicitly names the photographic or illustrative reference. All output assets land in /site/assets/img/ in the repo with the filename given.

8.1 Existing photography (provided)

img-01-hero-dash.jpg

iPhloat case standing on a boat dashboard, navy hull lake behind it, sun on the right. Hero candidate for /. (Provided.)

img-02-cooler-message.jpg

iPhloat-fitted iPhone resting screen-up on a boat cooler, iMessage notification visible. Use on /features and the lifestyle band on /. (Provided.)

img-03-floating-retrieval.jpg

Man in sunglasses kneeling on a wooden dock reaching for an iPhloat-cased phone floating screen-up beside a boat. THE signature image — hero candidate for /how-it-works and the OG share image for the entire site. (Provided.)

8.2 Lifestyle photography (to be generated)

Style baseline for all lifestyle images: documentary, available-light, 16:10 or 4:3 aspect. Warm late-afternoon color temperature. Real water (no obvious CGI water). The case is consistently Marine Navy with the small iphloat wordmark on the back. No human faces in close-up without a clear context that supports the brand voice.

img-04-paddleboard.jpg Aspect 4:3, 1600×1200.

Prompt: Documentary photograph, late afternoon golden light, a person on a stand-up paddleboard on a calm freshwater lake, holding a navy iPhloat-cased iPhone in one hand, water beading on the back of the case. Apple logo subtly visible through clear back panel. Pine-forested shoreline in soft focus background. Natural color, not over-saturated. Real photographic grain. No text, no logos other than the small iphloat wordmark on the case back.

img-05-fishing.jpg Aspect 4:3, 1600×1200.

Prompt: Documentary photograph, early morning, mist on water, an angler in a small bass boat reaching across a tackle box for a navy iPhloat-cased iPhone resting on the deck. Faded baseball cap, weathered hands. Bright orange Hi-Vis lanyard visible. Soft warm light, real grain, documentary feel. No faces in close-up. Lake fishing, not deep-sea.

img-06-pool-family.jpg Aspect 4:3, 1600×1200.

Prompt: Documentary photograph, mid-afternoon, a residential pool deck, a navy iPhloat-cased iPhone resting on a teak side table next to a sun hat and a glass of iced tea. Out of focus background: children swimming. Warm summer light. The case is the focal subject; humans are blurred. Lifestyle, not stock-photo glossy.

img-07-surf.jpg Aspect 16:10, 1920×1200.

Prompt: Documentary photograph, late-day low sun, a surfer wading out of shallow ocean water in a short wetsuit holding a Hi-Vis Horizon iPhloat-cased iPhone aloft, droplets in motion. Wet sand foreground. Real ocean spray, real photographic grain. No close-up of face. The orange trim on the iPhloat is the visual anchor.

img-13-dock-night.jpg Aspect 16:10, 1920×1200.

Prompt: Documentary photograph, blue-hour just after sunset, a navy iPhloat-cased iPhone floating screen-up on still water beside a wooden dock, screen glowing with a notification. Reflection of dock lights on the water. Calm, deeply atmospheric. Real water, real reflection. Hero candidate for the Insurance page.

8.3 Product photography (to be generated)

img-08-product-front.jpg Aspect 1:1, 1600×1600. Studio product shot.

Prompt: Studio product photograph on a seamless bone-white background. A single iPhone in a Marine Navy iPhloat case, shown front-on, standing vertically. Soft three-point studio lighting, slight gradient shadow beneath. The screen shows the iPhloat lock-screen wallpaper (deep navy, no text). 9H tempered-glass screen protector subtly visible. Catalog quality. No reflections. Photographic, not illustrated. Clean, premium, Apple-adjacent aesthetic.

img-09-product-back.jpg Aspect 1:1, 1600×1600.

Prompt: Studio product photograph on a seamless bone-white background. The back of an iPhone in a Marine Navy iPhloat case. Crystal-clear back panel revealing the Apple logo, the camera deck, and the natural titanium of the iPhone. Small dark-grey iPhloat wordmark and WATERPROOF · FLOATS subhead at the bottom of the back panel. Soft three-point studio lighting. Premium catalog aesthetic.

img-10-product-trims.jpg Aspect 16:9, 1920×1080.

Prompt: Studio product photograph on a seamless warm-sand background. Three iPhloat cases lined up at a slight angle: Marine Navy on the left, Bone White in the center, Hi-Vis Horizon (orange band around the buoyancy chamber) on the right. Identical lighting, identical angle. Clean catalog presentation. The visual demonstrates trim color options at a glance.

img-11-product-magsafe.jpg Aspect 16:9, 1920×1080.

Prompt: Studio product photograph: a Marine Navy iPhloat-cased iPhone floating mid-air against a soft gradient navy-to-black background, with a MagSafe charger puck snapping into position from below, concentric magnetic field lines visible as a subtle illustrated overlay. Mixed photo-illustration style. Demonstrates MagSafe compatibility through the case back.

8.4 Illustrations & diagrams (to be generated)

img-12-cutaway-anatomy.png Aspect 4:3, 2000×1500. Technical illustration.

Prompt: Technical exploded-cutaway illustration of the iPhloat case anatomy, in a clean modern engineering-diagram style. Three-quarter view of the case with the back shell separated and floating above. Five numbered callouts with thin lines pointing to: (1) sealed buoyancy chamber — highlighted in cyan, distributed around the perimeter; (2) silicone perimeter gasket — highlighted in soft red along the seam; (3) MagSafe magnet ring — highlighted in gold, circular array in the back panel; (4) 9H tempered-glass screen protector — highlighted in pale blue at the front; (5) tactile button domes — highlighted in green at the side. Color palette: navy, white, cyan, gold, with subtle shadow. Clean technical aesthetic, Apple-keynote-quality illustration. Numbered callouts only — no descriptive text in the illustration; descriptions live in HTML alongside it.

img-14-buoyancy-diagram.png Aspect 16:9, 1920×1080. Technical illustration.

Prompt: Side-view technical illustration showing two phones underwater: on the left, a generic black hard case sinking to the bottom of a body of water, motion lines indicating downward travel; on the right, an iPhloat-cased iPhone floating screen-up at the surface, with a subtle dotted line indicating the waterline. Clean diagrammatic style, navy and cyan and white, with cool gradient background depicting water. Designed for the /how-it-works page; demonstrates the core differentiator at a glance.

img-15-insurance-cert.png Aspect 4:3, 1600×1200. Document illustration.

Prompt: Stylized illustration of the iPhloat Insurance Certificate. A clean, premium-feeling document on a soft warm-sand background, showing the iphloat wordmark, the words “iPhloat Insurance — 12 Month Coverage”, a sample policy number, a sample serial number, and a sample seal-test reading. Subtle navy-and-gold accents. The certificate is the physical artifact customers receive in the box; this image previews it on the /insurance page. Illustration, not photo. Soft drop shadow.

img-16-ip68-badge.svg SVG, vector. Badge.

Prompt: A clean modern certification badge in iPhloat navy and bone white. Circular shape, 200px reference. Center reads “IP68 / 10m / 30min” in three short lines, in a bold modern sans-serif. Small wave-icon decoration along the inner ring. Designed to sit alongside the MIL-STD-810H badge in the spec strip. SVG output preferred for responsive use.

img-17-mil-std-badge.svg SVG, vector. Badge.

Prompt: Companion badge to the IP68 badge. Circular, navy and bone white, 200px reference. Center reads “MIL-STD-810H / 8 ft drop” in two short lines, bold modern sans-serif. Small chevron-icon decoration along the inner ring. Pairs visually with img-16.

img-18-magsafe-badge.svg SVG, vector. Badge.

Prompt: Third badge in the series. Circular, navy and bone white, 200px reference. Center reads “MAGSAFE / Compatible” in two short lines. Small concentric-circle decoration suggesting magnetic alignment. Visual harmony with the IP68 and MIL-STD badges.

img-19-og-share.jpg Aspect 1.91:1, 1200×630. Social share image.

Prompt: Composite social share image for OpenGraph and Twitter. The iPhloat-cased iPhone floating screen-up on calm water (echoing the dock retrieval shot but tighter), with the headline “The iPhone case that won’t sink.” in a clean modern sans-serif, lower-third placement, white text with a soft drop shadow. iphloat wordmark in the bottom-right corner. The single image that previews when the site is shared anywhere; treat it as the most-seen surface of the brand.

img-20-icon-system.svg SVG sprite, vector. Icon set.

Prompt: A coherent line-icon set in iPhloat navy stroke (1.5px), 24px reference. Eight icons: float (a wave with a phone above it), shield (drop protection), droplet-with-checkmark (waterproof), magnet (MagSafe), lanyard (the small loop), camera (clear lens passthrough), insurance (a ribbon-with-tick), conversation (the Ask iPhloat Spinner). Consistent stroke weight, consistent corner radius. Designed as a single sprite sheet for the /features and /how-it-works pages.

8.5 Generation notes for Claude Code

All image generation calls go through the OpenAI Images API. Use `gpt-image-1` as the primary model. For transparent-background SVG-equivalent badge work, generate as PNG with a transparent background and convert to SVG via `vtracer` or `hand-trace`; the badge prompts are simple enough that a vector-clean result is achievable. Set quality: "high" on every product and lifestyle image. Set size to match the aspect specified for each asset. Persist generated images to `/site/assets/img/` in the repository, with the filename given. The Apple iPhone is a real product; generated imagery should depict the iPhone naturally without rendering Apple's trademarks oversize or in any way that would suggest co-branding. Faces in lifestyle images should be soft-focus or out-of-frame, both for legal cleanliness and for brand voice (the case is the subject, not the model).

9. Implementation Notes for Claude Code

The following are operational notes for the Claude Code session that will scaffold and build iphloat.com from this brief. Order matters; skip nothing.

9.1 Repository scaffolding

Initialize the repository at ~/iphloat on the M5 Max MacBook Pro. Structure follows the canonical Webspinner-powered site layout already established in the README: /site, /cart, /content, /spinners, /deploy, /studio. The first commit should land the README and this brief together; the brief is canonical and should never be deleted from the repo, even after launch.

9.2 Content authoring order

Build pages in this order: (1) /about, because it grounds the Spinner's understanding of the brand; (2) /how-it-works, because it is the most heavily indexed page for support questions; (3) /features; (4) /insurance; (5) / (home, last — the home synthesizes the others); (6) /pre-order; (7) /support and /account auth gating; (8) /press; (9) /legal scaffolds (drafted separately by counsel before launch).

9.3 Spinner indexing

On every commit to main, the Webspinner Studio post-commit hook re-indexes the entire /content directory plus this brief into the iPhloat support Spinner. Source citations point to filename + heading anchor. The Spinner's response style is calibrated to match iPhloat brand voice (see Section 2): plain, confident, occasionally dry, never performative.

9.4 Authentication and forms

All inbound contact lives behind authentication. /account is the registration and login surface. /support, /press, and /pre-order render auth-gated forms — anonymous visitors hit /account with a context-preserving redirect. No email addresses are exposed in any scrapeable surface, including commit messages, issue templates, and the README. Add a CONTRIBUTING.md rule enforcing this. Cloudflare Turnstile sits in front of /pre-order to mitigate reservation-spam.

9.5 Pre-order data model

Each pre-order is a row in the preorders table (Webspinner Commerce module): account_id, iphone_model, trim_color, insurance_optin (boolean), reservation_number (monotonic), reservation_timestamp, ship_priority (computed), cancellation_timestamp (nullable). No payment instrument is captured at pre-order; payment is taken at ship time via a return-to-checkout flow.

9.6 Performance and accessibility

Lighthouse target: 95+ on Performance, Accessibility, Best Practices, and SEO for every page. WCAG 2.2 AA at minimum. All image assets served as WebP with JPG fallback through Webspinner.Cloud's edge image pipeline. The lifestyle photographs are heavy; lazy-load everything below the fold. The Ask iPhloat Spinner is the only JavaScript-required surface; the rest of the site renders fully without JS.

9.7 Deployment

Continuous deployment from main to iphloat.com via Webspinner.Cloud. Every PR opens a preview URL on preview.iphloat.cloud automatically. DNS points the apex and www of iphloat.com at Webspinner.Cloud's edge. The webspinner.app marketplace listing is published in parallel, demonstrating iPhloat as a reference Powered-by-Webspinner build.

9.8 What ships in the first sprint

Sprint S-7 (the current sprint) ships: home, how-it-works, features, insurance, FAQ, about, /account auth, /pre-order form (no payment), /support Spinner, /press auth-form, /legal scaffolds (placeholders marked NOT_FOR_PUBLIC), the full image manifest from Section 8, the OG share image live, and a sitemap.xml. Everything else in the roadmap (engineering updates feed, field-test cohort tooling, production order management) is later sprint work.

9.9 What this brief is not

This brief is the starting point for the build, not the final shape of the site. The AI-Native experience layer (Section 6) means the site grows past this brief over time as customers ask questions and as the engineering updates land. Nothing in this document should be treated as immutable; everything should be treated as the best current articulation of what iPhloat is and what iphloat.com should be on launch day. Iterate accordingly.

End of brief. Built with Webspinner. Hosted on Webspinner.Cloud. Stewarded by the Webspinner Foundation.
